

## **Graduate assistantships available**

Two graduate assistantships are available in the Muscle Physiology Lab and the Vascular Physiology Lab in the School of Kinesiology at Auburn University starting in the Fall 2015 semester.

Dr. Gladden's research focuses on muscle metabolism and muscle blood flow. These experiments are performed in vitro and in situ.

Dr. Kluess is interested in the metabolism and function of ATP and neuropeptide Y in the body. Her current focus is on the effect of ATP and neuropeptides on muscle function and metabolism. This work is performed primarily in humans, but may also include cell culture and animal models.

If you are interested please contact Dr. Gladden at [gladdlb@auburn.edu](mailto:gladdlb@auburn.edu) or Dr. Kluess at [hak0006@auburn.edu](mailto:hak0006@auburn.edu).
